AN ASTRONOMICAL DIARY; OR, A L M A N A C K

For the Year of Christian Era,

1 7 7 0.

leing the second Year after BISSEXTILE OF LEP-YEAR. In the 10th Year of the Reign of King GROKEE IIId.

CONTAINING, WHEE

clipses, Sun and Moon's rising and setting;—Moon's Place;—the rising, setting and southing of some of the principal fixed Stars;—Courts in the sour New-England Governments;—observable Days;—Spring Tides;—Judgment of the Weather;— Time of High-Water at Befon;—Fulling and changing of the Moon;—Planets mutual Aspects;—Vulgar Notes;—Roads, with the best Stages or Houses to put up at;—a brief Essay on Comets;—Names and Characters of the Signs, Planets and Aspects;—a very entertaining and instructive Diaogue between Heraclitas and Democritus, suited as near a possible to the Complexion of the Times:—With many other Things useful and entertaining.

culated for the Meridian of Boston, in New-England, Lat. 42 Deg. 25 Min. North: And 4 Hours and 40 Minutes West from the Meridian of London; but may

ndifferently serve any Part of New-England.

By NATHANAEL LOW.

A Student in Physic.

When my short Glass it's latest Sand shall run, and Death approach to fright the Lookers-on; oftly may I sigh out my Soul in Air, tand thou, my pitying Guardian Angel, there: Guide and conduct her through the Milky Way, To the bright Regions of immortal Day."

OSTON: Printed and Sold by KNEELAND and ADAMS, in Milk-Street. 1770.

Of the Eclipses for the Year 1770.

HERE will be but two Eclipses this Year, both of the

Sun, and both invisible.

I. The first will be on the twenty-fourth Day of May, a 32 Minutes past 8 o'Clock in the Evening; it will be a great Eclipse, but below the Horizon, and therefor invisible.

II. The second will be on the seventeenth Day of November about half after 5 o'Clock in the Morning; it is celebrated in about 25 Degrees of the Celestial Scorpion.

Of COMETS OF BLAZING-STARS.

The late remarkable Comet, which for some Time made its Appearance in our Hemisphere, having been the Occasion of muc Enquiry; I shall fill some of my wacant Pages with a fee Thoughts on that Subject.

NOMETS are a kind of temporary. Planets which appear only for a Season, and then withdraw themselves from our Sight. Plutarch informs us, that the Pythagorean Sed affirmeth, That a Comet is a fort of Planet or wanderin Star, which appeareth again after a long interval of Tim Appolonius affirmed, that a Comet was a Star of its ow kind, as the Sun and Moon are, that by its Motion ascends very high in the Heavens, and is conspicuous to only when it descends into the lower Parts of its Orb. Sened embraces this Opinion, and fays, " I cannot believe a Come " is a Fire suddenly kindled, but that it ought to be ranke "among the eternal Works of Nature," &c. But the whol Sect of the Peripateticks, fearing Generations and Corruption should be introduced into the Heavens, by placing Comets i them, thrust all the Comets down into the fublunary Region and would maintain that they were only a kind of Meteors .-Howbeit their Phanomena will by no means allow of the being placed so low; it being certain from Observation, the they are subject to little or no sensible diurnal Parallax; an therefore instead of their being gendered like Meteors in or Atmosphere, which does not ascend above 50 Miles from th Surface of our Earth, it is certain they are far beyond th Moon: Which immense Distance is the reason why they man times appear to us as it were no bigger than a Point. But they are subject to the Parallax of the Annual Orbit, it is m nifest they descend into the Region of the Planetary System.-They revolve about the same Sun the Planets do, -are subje

the same Law of Gravitation, and would certainly fall to e Sun, if their projectile Velocities were stopped.—Their bits are extremely Eccentrick; so that when they ascend wards their Aphelion, where the force of Gravitation toards the Sun is small, and their projectile Velocity proporbrably lessened, they consequently move forward in their rbits with a very slow Motion, which is probably the reason their being so long in performing their Revolutions round e Sun.

They never make their Appearance before they descend into e planetary Region in their Way down to their Perihelion, here their Velocity is greatly increased in Consequence of eir near Approach to the Sun; so that they spend but a sall Part of their Time with us, before they withdraw them-less into Regions far Distant from our Sight, and spend the eatest Part of their Time in travelling through the Voids

unrefisting Space.

Their apparent Magnitude has been observed to be very fferent : Some which have been feen Hairy, without any ails, have appeared no bigger than a Star of the first or cond Magnitude: But some Authors give an Account of hers which have been feen much bigger; particularly that hich appeared in the Time of the Emperor Nero, which as neca relates, was not inferior in Magnitude to the Sun itf. That which appeared in the Year 1652, and observed Heveling, did not feem to be much less than the Moon, ough it did not emit so bright a Splendor; but gave a pale d dim Light, and appeared with a dismal Aspect. Most omets are furrounded with an Atomsphere, confishing probly of dense Vapour, which blunts the Rays of the Sun that Il upon it : Some, which have been feen to give a brifk d shining Light, have Atomspheres probably not quite so nfe. Their Heads are very folid, compact and durable, herwise they could not endure such a prodigious Degree of eat, as some of them do in their Approach to the Sun; parularly that remarkable Comet that appeared in the Year 80, which in its Perihelion was not above one fixth part of Sun's Diameter from his Surface. The Sun feen at that me from the Body of the Comet, would appear to fill the eatest part of the Heavens: Its apparent Diameter would be less than 120 Degrees; and therefore the Heat rex ved from thence, must be prodigiously intense beyond Imaacion, two thousand Times at least greater than that o

red-hot Iron; which this Comet could never have endured, if it had been nothing but Vapours and Exhalations from the Earth and Planets, as some have dream'd, but must have been

quite deftroyed and diffinated.

Their Tail is a luced Train of the most subtile Emanations, projected with an immense force from the Heads, after having been sufficiently rarified and attenuated in the Neighbourhood of the Sun; they are probably darted out every way equally round the Heads; but are driven back from the Part which is towards the Sun, as though there was a mutual repulsion between them and the Sun Beams; and in this Scituation they are always seen.

The Ancients supposed that Comets were ever portentous of some dire Event; and some even among our selves have thought them capable of producing very extraordinary Effects; fuch as great Tempets, Hurricanes, Inundations, and Alterations of Rivers and Channels of Seas, &c. and laftly, Deluges and Confligrations on the planetary Bodies, &c. But for my own Part I believe them to be capable of no fuel mighty Feats, nor indeed of any other than that of a certain Panic into which great Numbers of People are generally thrown by fuch Appearances, unless some Alteration is pro duced in the Constitution of our Atmosphere by large Quan tities of their Effluvia incorporating with it, then indeed w may be obnexious to the Effects which such an Alteration mu naturally produce; and if the matter of which there Effluvi confift, is of a noxious, heterogeneous Quality, fo that mixing with our Atmosphere, it comes to be degenerated and corrup ted; nothing very falutary can be expected: But if the Effluvia are of quite a contrary Quality (which is most likely from such rarified and well refined Matter as the Tail of Comet appears to confit of) then they must certainly be pro ductive of quite the contrary Effects :- So that though w may juftly fear "alarming Confequences" from abounding Vice, yet no one need be alarmed by the late Appearance of Comet, as it is no ways likely it can possibly be productive of Consequences of a malevolent Tendency.

Vulgar Notes this Year are,
Golden Number 4 { } Cycle of the Sun,
Epact, 3 { } Dominical Letter,

The illustrious Planet Venus will be Oriental or Mornin Star to the 28 Day of March; thence Occidental or Evenin Star to the End of the Year.

DIALOGUE between HERACLITUS and DEMOCRITUS.

A. A LAS! thou laughst perhaps not feeling well

The painful Torments of this mortal Hell:

h! canst thou tearless in this iron Age,

e Men massacred Monsters born to rage.

DEMO. Ha! but why weepst thou? wherefore in this Sort Dost thou lament amidst this merry Sport? Ha! canst thou chuse but laugh to see the State Of Men's new Follies, and the Freaks of Fare? HERA. He hath no Heart that melts not all in Tears, To see the Treasons, Murders, Massacres, Sacks, Sacriledges, Losses, and Alarms, Of those that perish by their proper Arms.

First Quart. 23 Day 7 Morn. | Last Quart. 17 Day 8 Mo Full Moon 9 Day 11 Aftern | New Moon 25 Day 11 Mo

IV.

My Soul then shou'd not sigh to anger Heaven,
Nor for her Plagues, my tender Heart be riv'n.
Demo. I take the World to be but as a Stage,
Where Net-mask'd Men do play their Personage:
'Tis but a Mumm'ry and a pleasant Show;
Since over it strange Vanities do flow.
Hera. These Vanities I have in Detestation,
As cursed Causes of God's Indignation;

Mo. I laugh to see all Cause of Laughter gone, have those which (thou just saidst) have caus'd the Moan: loting the old Guise, I laugh at all their New: laugh at more, but dare not tell it you.

A. Some Sorrows also I in Silence keep; ut in the Desart all my Woes shall weep; and there. (perhaps) the Rocks will help me then; or in the Days they are more mild than Men. Demo

Il Moon 3 Day 6 Morn, New Moon 17 Day 6 Morn. It Quart. 10 Day 1 Morn. First Quart. 25 Day 9 Morn.

1770 DEMO. I'll dwell in Cities (as my Genius guides) To laugh my fill; for fimiling PEACE provides Such plenteous Store of laughing Stuff to fill me, That still I'll laugh unless that Laughing kill me.

Full Moon 2 Day 5 Aftern. | New Moon. 16 Day 2 Ma Last Quart. 9 Day 9 Morn. First Quart. 25 Day 4 Mo

'Tis dreadful to behold the fetting Sun	20

'I's dreadful to behold the fetting Sun, And Night approaching, e'er your Work is done. Names and Characters or the Signs, Planets and Aspects.

Aries, the Ram.

Taurus, the Bull.

Gimini, the Twins.

Cancer, the Crab.

Leo, the Lion,

Virgo, the Virgin.

Names and Characters or the Signs, Planets and Aspects.

My Scorpio, the Ballance.

My Scorpio, the Scorpion.

Aguarius, the Archer.

Capricornus, the Gost.

My Pisces, the Fishes.

The Ecliptic is a great Circle intersecting the Equinoctial two opposite Points, the beginning of Aries, and the beginning of Libra, and makes an Angle therewith of 23 Degr 29 n. It is divided into 12 equal Parts, called Signs, whose mes and Characters are as above.—

28

The Zodiac is a broad Circle or Zone of about 16 Degrees Breadth, which the Ecliptic cuts in the middle. In this ace, as the Planets continually perform their Revolutions ough the 12 Signs, they often make several remarkable stances between, and Aspects to or with each other;—
aracter'd as follows, viz. 6 Conjunction, is when two Planets are both in the same Degree. If Semisextile when they are sant 1 Sign or 30 Degr. & Sextile—2 Signs. 10 Quarant 1 Sign or 30 Degr. & Sextile—2 Signs. 11 Quarant 1 Signs. A Tride—4 Signs. Vc. Quincunx—5 Signs. Opposition is when the Planets are 6 Signs or 180 Degr. ant.—Planets. It Saturn. 14 Jupiter. 8 Mars. Sun. 9 Venus. 8 Mercury. 12 Moon.

Barth.—des. 8 Dragon's Head.—8 Dragon's Tail.—

Account of the Tides according to the Course of the Moon. ANUARY, very high Tides at the Full.—February, very high Tides at the Full.—March, pretty high Tides from Perige to the Full.—April, no very high Tides this nth.—May, high Tides at the Change.—June, very high les at the Change only.—July, very high Tides at the ange only.—August, high Tides at the Change only.—tember, high Tides from the Perige to the Change.—tober, high Tides from the Perige to the Change.—Nonber, no very high Tides this Month.—December, high les at the Full.

Note, It is high Water at Salem, Ipswich, Newbury, &c. half Hour sooner than at Boston; for which Place the Time High-Water in this Almanack is calculated. It is Highter two Hours and 20 Minutes sooner at Tarpaulin-Cove, w-London, and New York;—three Hours sooner at Rhode and Amboy;—five Hours sooner at Sandy-Hook;— Hours and an half sooner at Albany;—three Hours later hiladelphia;—half an Hour later at New Haven

ARGOS, ULYSSES'S DOG. WHEN wife Ulysses from his native Coast, Dong kept by Wars, and long by Tempest to Arriv'd at laft, poor, old, disquis'd, alone, To all his Friends, and ev'n his Queen unknown; Chang'd as he was with Ages, Toils and Cares, Forrow'd his rev'rend Face, and grey his Hairs; In his own Palace forc'd to ask for Bread, Scorn'd by bose Slaves his former Bounty fed; Forgot of all his own domestic Crew, His rightful Dog his faithful Mafter knew : Unfed, unhous'd, neglected, on the Clay, Like an old Servant now cashier'd he lay; And though ev'n then expiring on the Plain, Touch'd with Resentment by ungrateful Man, And longing to behold his ancient lord again. Him when he faw-he rose and crawl'd to meet, (T'was all he cou'd) and fawn'd and kis'd his Feet; Seiz'd with dumb Joy, then falling by his Side, Own'd his returning lord-look'd up-and dy'd. POPE.

MODESTY a DISSEMBLER.

CELIA, before the ardent lover came,

To evidence his own and raise her slame,
Whenever love was mention'd faintly said,
"She did not choose (nor ever shou'd) to wed."
Yet while she spoke, a sudden blush betray'd
The secret wishes of the pining maid.
At length a spark, with charms inviting bless,
His suit with manly heat and vigour press,
Her former coyness soon she laid aside,
To prove the unknown pleasures of a bride.

Thus little boys, more bashful far than wise, The cake unseen resuse with downcast eyes, But when 'tis brought, no longer can deny't; Their modesty's o'ercome by appetite.

The Man's Choice, whether he would be banged or married

Take which of these best pleaseth thee.
"The Bargain's bad on either Part;

"The Woman's work ;----drive on the Cart.

"Wedding and Hanging, Destinies Dispatch," But Hanging seems by far the better Match."

ISTANCES of the principal Towns on the ontinent from Boston, with the most noted louses of Entertainment on the Roads.

CAGRIENTO IA	NEW YEAR'S-	WIS	Н,
IVI To you,	Bleffiog mention'd my Friends! by ife-! each Day	her all	e be giv'n gracious Heaven!

AY ev'ry Bleffing mention'd here be giv'n

To you, my Friends! by all gracious Heaven
Long be your Life—! each Day new Pleasures prove
And know th' Happiness of Liberty and Love!
And when, the Amusements of this Life's all o'er,
Ev'en you must die, and go to be no more;
May Smiling Angels ease your parting Breath,
Dispel the Shades, and all the Gloom of Death!
May they conduct you to the bright Abode,
To join and rival them in praising GOD!—

All Persons who are inclined to encourage the Paper Ma sacture, are requested to save their old Cotton and Linnen R &c. for which they may have a good Price at the Paper M at Milton.
